

## REPORT

### ENGINEERING EXPO

Engineering Expo was conducted on 2<sup>nd</sup> August 2016 by the Education and R&D department of Street Cause, GRIET. Projects of all the branches of Engineering in GRIET were exhibited in this event. Students of secondary school from Zilla Parishad High School and Ganges Valley School were invited to visit the Expo. A total of 27 projects were exhibited and 240 school students had visited the Expo. The students were given demonstrations and an overview of the projects and they were also taken to see the college laboratories. The projects displayed included DIY Solar Panel, Robotic car, Electronic Stethoscope, various apps, pedal operated mixer accident detection system and many more.

The prime motive of this event was to give the school students an overview of what engineers do and how each branch is different from the other. This would give them a glimpse of what might be their career one day and a better exposure in considering engineering as a career choice. The students who visited were shown working models of various kinds. The participants who displayed their projects got a platform to showcase their handiwork and share their ideas.

They watched and listened with awe and interest and raised an array of questions out of their curiosity. They were delighted to witness the works of engineering students. The participants who displayed the projects participated with enthusiasm and were pleased to share their innovative ideas and explained their projects with a lot of interest. The efforts of the all the organizers and volunteers were paid off when the school students and the participants left a positive feedback before the event ended.
